LUXE

An AI Shopping Assistant for Your Store

Customers ask in plain English. Your catalog answers.

Forward-Deployed Engineering · Proposal & Delivery Plan

Agenda

1. **The opportunity** — why customers want this
2. **What we'll build** — a chat box on every page
3. **How it works** — four steps, every message
4. **How we'll deliver it** — working software at every stage
5. **Safe & reliable** — what keeps it trustworthy and up
6. **What it costs** — a realistic monthly bill
7. **The plan** — about six weeks to live

THE OPPORTUNITY

Finding a product is still work.

Pick a category. Drag a price slider. Scroll. Repeat. Many shoppers give up before they buy.

TODAY

Category → Price filter → Scroll → Sort → Scroll again

WITH THE ASSISTANT

“men's shirts under ₹2000”
→ the right products, instantly

WHAT WE'LL BUILD

A chat box on every page.

- **Ask in your own words**

  No filters, no menus. Just type what you're looking for.

- **Real products from your catalog**

  It only shows what's actually in stock — never made-up items.

- **Works everywhere**

  Mobile and desktop. Nothing to install.

HOW IT WORKS

Four steps, every message.

01

Ask

The customer types what they want.

02

Check

We make sure the message is safe and about shopping.

03

Find

The assistant looks up matching products in your catalog.

04

Check again

We review the answer before the customer sees it.

Steps 2 and 4 are automatic safety checks. They add well under a second.

HOW WE'LL DELIVER IT

You see working software at every stage.

01 **SEE** ~1–2 weeks

We work inside your store — learning the catalog, the data and how everything runs. Hands-on, not from a document.

02 **PROVE** ~1–2 weeks

We build a small working demo on your real products. You try it. You decide whether it is worth continuing.

03 **SHIP** ~2 weeks

We fold the assistant into your live store, add quality checks and go live — with the store untouched.

Nothing is a black box. If the demo doesn't convince you, we stop there — no lock-in.

SAFE & RELIABLE

Built to be safe.

1

Two safety checks

One before the assistant reads a message, one before the customer sees the reply. Blocks abuse; keeps it on shopping.

2

Read-only

The assistant can look at your catalog but can never change prices, remove products, or touch customer or order data.

3

No made-up answers

It only shows products that are really in your catalog. It never invents names, prices, or stock.

4

Can't be tricked

It won't ignore its rules or reveal its instructions — even if a customer deliberately tries.

SAFE & RELIABLE

Built to stay up.

1

Keeps working under failure

If a safety service has a hiccup, chat still runs. One slow part never takes the page down.

2

Graceful errors

If the assistant itself has a problem, the customer gets a friendly “try again” — never a broken screen or a wrong answer.

3

Every conversation recorded & scored

We can replay exactly what happened, and every reply gets an automatic quality score.

4

Safe to change

A full automated test suite runs before every update. If anything looks off, we roll back in one step.

WHAT IT COSTS

You pay for what's used.

	Pilot ~1,000 chats / mo	Launch ~10,000 chats / mo	Busy ~50,000 chats / mo
AI usage	~ $1	~ $5	~ $25
Extra cloud compute	< $1	~ $3	~ $12
Monitoring	$0 (free tier)	$0 (free tier)	$0 – $50
Total / month	**under $2**	**~ $8 – $10**	**~ $40 – $90**

The AI layer stays in single-digit dollars until you're handling tens of thousands of conversations a month. No licence fee. No minimum.

Approx. public rates, Sept 2026. Your existing store hosting and database are unchanged — this is the added cost only.

THE PLAN

About six weeks to live.

Weeks 1–2

SEE

Discovery inside your store

Weeks 2–4

PROVE

Demo on your catalog + your go / no-go

Weeks 4–6

SHIP

Integrate, quality checks, launch

The go / no-go decision comes after the demo — before any integration work starts.

Let's build it.
